Build Page On	https://www.onedayonly.co.za/shops/extra-time-deals
Alternative Templates	None
Variant Name	Categorized Product Carousels on XTD page
Primary Conversion Action	
Deploys	None

Background

Products on the Extra Time Deals (XTD) page are currently displayed as a flat, ungrouped list. By organising products into category-based groups with carousels, users can more easily browse relevant products and navigate to full category pages, which is expected to improve product discovery and increase engagement and purchases.

Summary of Changes

1. Products on the XTD page will be grouped by category,
 - a. each displayed in a dedicated carousel section
 - b. with a category heading and a "View All" link.

UX/UI

Category Groupings

1. Products will be grouped by their parent category.
2. Each category group will display a heading with the category name above the carousel.
 - a. Refer to Figma for heading font size, weight, and colour.
3. Each category group will display a "View All" button/link.
 - a. Clicking "View All" will navigate the user to the relevant category page.
 - b. The "View All" link should be positioned to the right of the category heading, on the same row.
 - c. Refer to Figma for "View All" link font size, colour, and any underline or hover treatment.
4. Categories should be listed in the following order
 - a. Apparel & Accessories
 - b. Home & Garden
 - c. Health & Beauty
 - d. Electronics
 - e. Furniture
 - f. All other categories below this.

Carousel — Desktop

1. On desktop, each category carousel will display **4 product cards** at a time.
 - a. If a group has less than 4 or less. A carousel should not display
 - i. Cards can be left aligned
2. A **left arrow** and a **right arrow** navigation control should display on either side of the carousel.
 - a. The left arrow should be hidden when the carousel is at the first position.
 - b. The right arrow should be hidden when the carousel is at the last position.
3. Clicking an arrow will scroll the carousel to reveal the next set of products.
4. Arrow styling:
 - a. Arrows should display as circular icon buttons, overlapping the edge of the carousel.
 - b. Refer to Figma for arrow button size, background colour, icon colour, and shadow treatment.

Carousel — Mobile

1. On mobile, each category carousel will display **2 product cards** fully visible, with the **3rd product card 20% visible** at the right edge of the frame.
 - a. The partial visibility of the 3rd card serves as a visual cue that more products can be swiped to.
2. Navigation on mobile should work via **touch/swipe gestures** (horizontal swipe).

3. Arrow controls should **not** display on mobile.

Change Checklist

Test Analysis:

 **Test Page:** Extra Time Deals Pages

 **Targeting Type:** Global JS

 **Global JS Required:** ☒ Yes

 **Implementation Details:**

- The test will run **only** on **Extra Time Deals** pages using Global JS targeting.
- A **category group structure** will be implemented using **JS**.
- Each **carousel section** will display a **heading with the respective category name** above it.
- The heading will be dynamically inserted based on the category grouping logic.

Logic & Rules

1. Products should be grouped by their parent category.
 - a. If a product belongs to multiple categories, it should appear under its primary/parent category only.
2. Category groups with no products should not render — only groups containing at least one product should display.
3. The "View All" link for each category group should point to the corresponding category page on the site.
4. The carousel scroll behaviour should be smooth.
5. From previous tests, we know that if we rebuild the page, we cannot keep the add-to-cart functionality.
 - a. Because of this, when the user clicks the "Plus" icon on a product card, the user should be directed to the relevant product page.
