Variant Name	PDP Buy Box Redesign
Deploys	None

Background

Diagnostic data shows that 72-75% of PDP users never see the free delivery information, and 81-87% never see the available payment options. No trust signals exist near the Add to Bag button. Three previous tests attempted to surface this information using banners and strip elements; all failed due to banner blindness and visual prominence issues. This test integrates delivery, trust, and payment information directly within the buy box to ensure these signals are seen without disrupting the premium visual language of the page.

Summary of Changes

1. On desktop, the Add to Bag button will be widened to fill the remaining space in its row.
2. On mobile, the price, quantity selector, and Add to Bag button will be inserted into the page. These elements currently do not display on mobile.
3. The existing mobile sticky footer will be adjusted so that when the newly inserted Add to Bag button comes into view, the sticky footer slides off the page, and returns when it leaves view.

4. A delivery badge will be added within the buy box, displaying delivery promise copy determined by the product type and delivery availability.
5. A USP strip will be added below the buy box, displaying product-specific trust icons and labels sourced from a Google Sheet, with "Easy, hassle-free returns" displayed on all products.
6. Payment icons will be added below the expandable section.

UX/UI

1. On desktop, the Add to Bag button should be widened to fill the remainder of the row in which it currently sits.
2. On mobile, the price, quantity selector, and Add to Bag button should be inserted into the page.
 - a. These elements currently do not display on mobile and must be added to the page.
 - b. The quantity selector should display as a bordered container with the following elements in a horizontal row
3. The existing mobile sticky footer should be adjusted to respond to the visibility of the newly inserted Add to Bag button.
 - a. The sticky footer should continue to display by default.
 - b. When the inserted Add to Bag button enters the viewport, the sticky footer should slide downward and out of view.
 - c. When the inserted Add to Bag button exits the viewport, the sticky footer should smoothly slide back into view from the bottom of the screen.
4. A delivery badge should display within the buy box area.
 - a. The badge should contain the following elements:
 - i. A delivery icon on the left.
 - ii. Delivery promise text to the right of the icon.
 - iii. A "View more details." link appended to the end of the delivery text, linking to <https://shop.babylonstoren.com/za/l/xs9kanfdm2agix4gs9ird414/delivery>.
 - b. The delivery text displayed should be determined by the product type and delivery availability. See Logic & Rules for the full set of conditions and copy.
 - c. If the product is unavailable, the delivery badge should not display.
5. A USP strip should display below the buy box.
 - a. The strip should display USP items in a horizontal row.
 - b. Each USP item should contain:
 - i. An icon displayed above the label.
 - ii. A short text label displayed below the icon.
 - c. Where USP icons already exist on the page (for example, "Delivered frozen"), these should continue to display in their current location and should not be duplicated.
 - d. The following USP should display on all products: "Easy, hassle-free returns."
 - e. The remaining USPs are product-specific. The icons and labels should be sourced from the Google Sheet. See Logic & Rules.
6. Payment icons should display below the expandable section.
 - a. The payment section should contain the following elements:
 - i. A lock icon on the left.

- ii. The text "100% secure payments" displayed to the right of the lock icon.
 - iii. Accepted payment method logos displayed in a horizontal row.
- b. The following payment logos should display: Apple Pay, American Express, Visa, Mastercard, and gift card.
- c. All payment logos should be exported as SVG files and displayed in grayscale.

Test Analysis:

 **Test Page:** PDP (Product Detail Page)

 **Targeting Type:** Global JS

 **Global JS Required:**  Yes

 Implementation Details:

- The test will run only on Babylon product pages using Global JS targeting.
- The existing Add to Bag button will be widened on desktop to fill the remaining row space.
- A new mobile Buy Box section will be created with price, quantity selector, and Add to Bag button.
- The mobile Sticky Footer will hide when the new Add to Bag button is in view and reappear when out of view.
- A new Delivery Badge section will be added inside the Buy Box with icon, dynamic text, and details link.
- A new USP Strip section will be inserted below the Buy Box with icons and labels in a horizontal row.
- A new Payment Methods section will be added below the expandable area with secure text and payment logos.

Change Checklist

- 1. What sections need to be updated
 - 1.
- 2. Does the remainder of the page need to be updated?
 - 1.
- 3. Do font sizes, colours, and families need to be updated?
 - 1.
- 4. Does this only apply to the new sections?
 - 1.
- 5. What device widths need to be used?
 - 1.
- 6. Do the developers need more designs to clearly illustrate what needs to be done?
 - 1.

Logic & Rules

1. The delivery badge copy should be determined by the delivery address set, and if the product is available, as follows:
 - a. If no address is set
 - i. And the CPT and JHB pills are displaying
 1. Display "Free next-day* delivery in Cape Town, Johannesburg & Pretoria. View more details."
 - ii. If no pills are displaying:
 1. Free next-day delivery in Cape Town, Johannesburg & Pretoria. View more details."
 - b. If the address is set and the product is unavailable
 - i. Do not display the delivery badge
 - c. If the address is set and the address does not contain Pretoria, Johannesburg or Cape Town
 - i. Free delivery nationwide. View more details.
 - d. If the address is set and the address does contains Pretoria, Johannesburg or Cape Town
 - i. Free next-day delivery in Cape Town, Johannesburg & Pretoria. View more details."
- a. If the address i

@Rafee if posilbe, could you put this text in a variable so I can update it quickly if needed

1. The "View more details." text in all states should link to <https://shop.babylonstoren.com/za/l/xs9kanfdm2agix4gs9ird414/delivery>.
 - a. The developer should investigate and discuss the delivery rules implementation to determine how product type and delivery availability can be detected.
2. Products are split into two categories: Normal and Fresh delivery.
 - a. Normal products are always available for delivery. Delivery timelines vary based on the user's location.
 - b. Fresh delivery products are only available for delivery within specific delivery zones.
3. USP icons and labels for product-specific USPs should be sourced from the Google Sheet:
 - a. <https://docs.google.com/spreadsheets/d/1DFj0T5koPhZTgFUKBCgOk5Ok2wSTjr10ST2CgH7rUi8/edit?gid=1093394149#gid=1093394149>
 - b. The developer should read the product from the current PDP and fetch the corresponding USP items from the Google Sheet.
 - c. Where USP icons already exist natively on the page, they should not be duplicated. The existing icons should remain in their current location.
 - d. "Easy, hassle-free returns" should display as a USP on all products regardless of product type.
4. **QC testing addresses:**
 - a. Fresh delivery available: 13 Orchard Street, Milnerton, Cape Town.
 - b. Fresh delivery not available: Worcester Central, Worcester, 6849, South Africa.
 - c. If no delivery address is set and the product is available for delivery, "CPT" and "JHB" badges will display on the page.
 - d. If a delivery address is set and the product is available for delivery, the CPT and JHB badges will not display, however the product can still be purchased.

- e. If the product is not available for delivery, the page will display "not available" and the user will not be able to purchase.
