Build Page On	All PLP category pages. Example https://www.onedayonly.co.za/category/apparel-and-accessories
Alternative Templates	None
Variant Name	Advertise XTD page with banners
Deploys	None

Background

An XTD promotional banner has been added to the Categories pages to highlight the **Extra Time Deals** page. The banner features a clear CTA labelled **“Take Me to Extra Time Deals”**, which redirects users directly to the Extra Time Deals page when clicked. On mobile, the banner includes a dedicated CTA positioned beneath the image, providing the same direct navigation to the page.

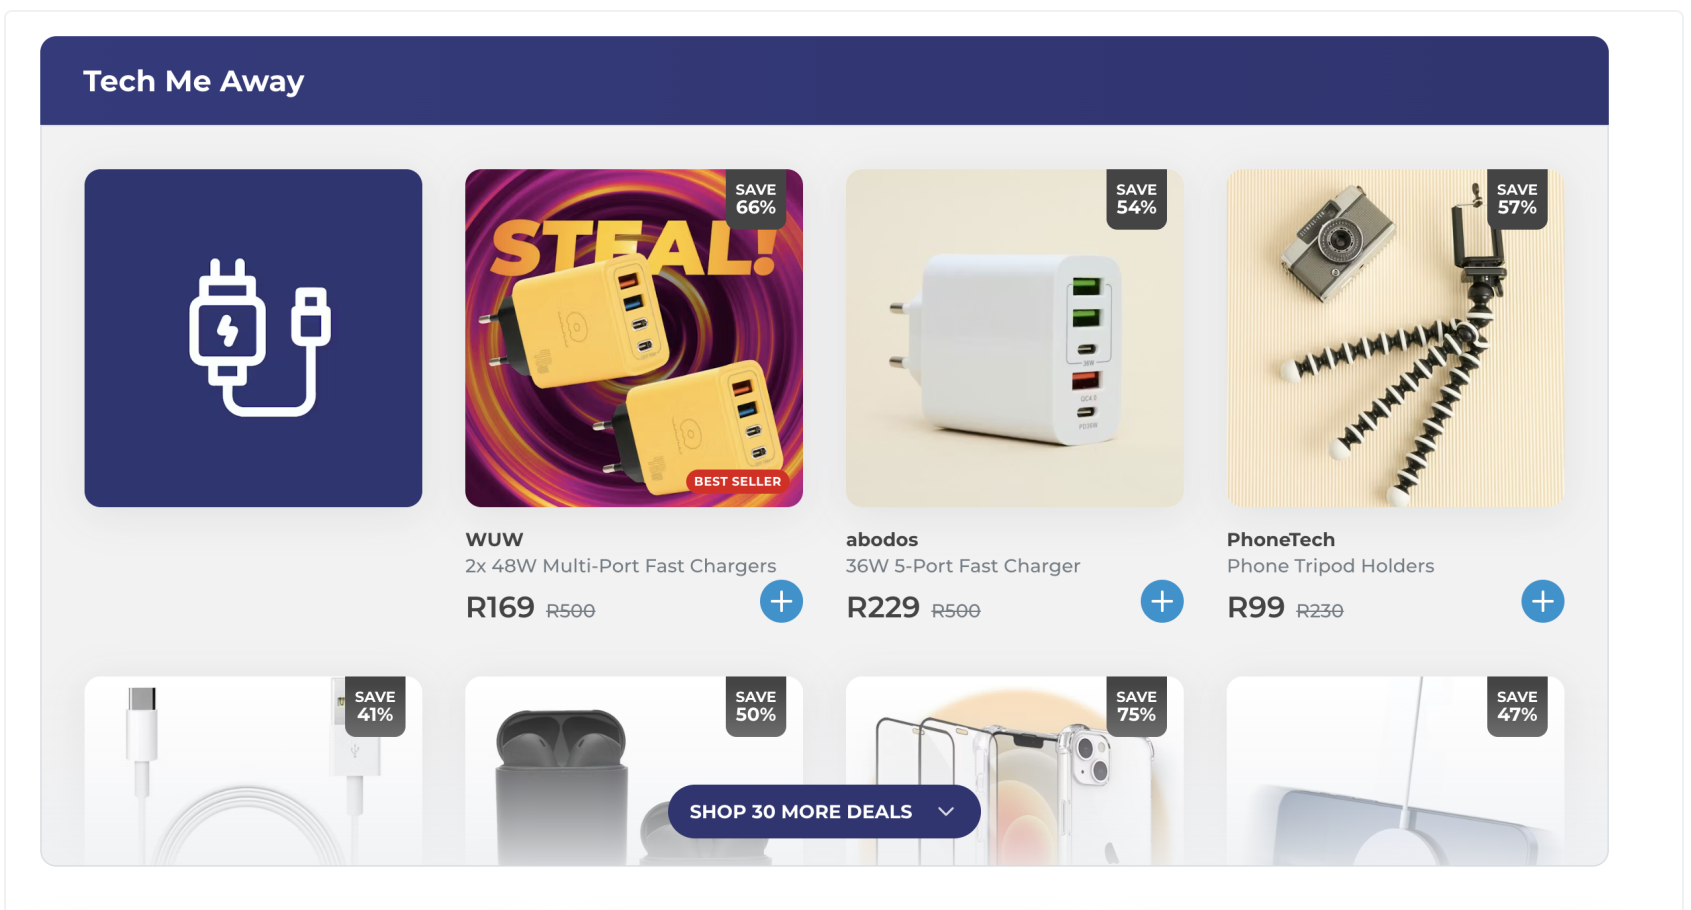

Promoting Extra Time Deals prominently on the Category pages increases visibility and awareness of the XTD offers, encouraging more users to explore the page. This increased exposure is expected to drive higher engagement with discounted products and contribute to an improved add-to-cart rate.

Summary of Changes

1. A banner will be inserted every few rows to advertise the XTD page

UX/UI

1. For Desktop, after every 4th row/Group, a banner should be inserted
 - a. For clarity's sake, a row can be defined as
 - i. a row of products
 - ii. A grouping of products in a "Shop more" container (See screenshot).
 - b. On mobile, as the page responds, the banner should fall under the row or container it displays on desktop
2. The banner should link to <https://www.onedayonly.co.za/shops/extra-time-deals>

Test Analysis

 **Test Page:** All **PLP Category Pages**

 **Targeting Type:** Global JS

 **Global JS Required:**  Yes

 **Implementation Details:**

- The test will run **only** on **all PLP category pages** using Global JS targeting.
- Product rows are identified by and we will add a custom class on below selector
 - `[cro-maincontainer="cro-product-container"]>div`
- A **custom class** will be added to **each row** using JS.
- **Banner insertion logic:**
 - **Desktop:** Insert a banner **after every 4 rows** of the custom class.
 - **Mobile:** Insert a banner **after every row** of the custom class.
- JS will handle dynamic rendering to support lazy-loaded or infinite-scroll PLPs.

Change Checklist

1. What sections need to be updated
 - a. Only the banner should be inserted
2. Does the remainder of the page need to be updated?
 - a. No
3. Do font sizes, colours, and families need to be updated?
 - a. No
4. What device widths need to be used
 - a. Mobile and desktop
5. Do the developers need more designs to clearly illustrate what needs to be done?
 - a. ...
